

## Winch Depth and Tension

This very successful product was developed as an addition to an oilfield system but has many possible applications in any area where winches are used.

It has been designed as a one man operation which allows simultaneous monitoring of the tension on the winch cable and the current depth of the tool socket. Data can be downloaded to a memory stick to allow easy processing.

The system can be linked to other manufacturers' systems

### Features

- Monitors the depth of a wire line cable as it is paid-out and reeled-in.
- Monitors the tension (load) on the cable.
- Protects the cable from exceeding a pre-set maximum tension.
- Configurable units
- Data can be downloaded
